## Ford Bridgend Case Study

We have undertaken new resin flooring projects and repairs to existing resin flooring at Ford Bridgend for the many years.

These vary from main production areas, all aspects of health & safety walkways, gangways and signs, anti static and heavy traffic areas.

We completed a project recently which involved removing and reinstating health and safety signage.

Areas were heavily diamond ground to remove any contamination and old lines. Footprints and minor repairs were diamond cut out, primed and filled with an epoxy screed.

We removed old zebra crossings and painted in block colour. New lines were reinstated. Footpaths were diamond ground and had block colour with lines and small stop signs applied.

We used Epoxy High Build Coating in the required colours.
